Dear Hiring Manager,

I am writing to express my interest in the QA Automation Engineer role focused on Playwright automation. With close to 3 years of experience in manual and automation testing, I bring a strong foundation in Selenium, Playwright, TestNG, and API testing, along with hands-on experience building AI-agent-based QA tooling — an area I believe is increasingly valuable as testing practices evolve.

In my current role as a QA Engineer at Viamagus Technologies, I work on Neubird, an AI infrastructure reliability platform, where I test monitoring and incident-management features, perform API testing and backend data validation, and run automated regression suites using Selenium and TestNG. I have also built AI agents to improve our QA workflow itself — including a bug logger agent for automated defect capture and a git checker agent for reviewing commits and pull requests — which has deepened my understanding of not just testing a product, but improving the testing process.

Prior to this, I worked across a range of domains and platforms — from a healthcare platform (OneCare) and a hiring and recruitment system (Neohire) to vendor management and customer support tools (ArenaCX) and consumer browser extensions (Prodege). Across these projects, I have designed test cases, automated regression suites, coordinated UAT across cross-functional teams, and consistently delivered high test coverage while accelerating defect resolution.

I am now looking to bring this experience into a larger, more structured organization where I can deepen my automation expertise, take on greater ownership, and continue growing in a team that values both engineering rigor and continuous learning. I would welcome the opportunity to discuss how my background in automation and AI-native QA tooling could contribute to your team.

Thank you for your time and consideration. I look forward to the possibility of speaking further.

Sincerely,
Naveen Kumar S
